

TABLE OF CONTENTS

PART I: THE GEOCHEMICAL TOOLBOX

Chapter 1: Introduction	1
Geochemistry.....	1
This Book	2
The Philosophy of Science.....	4
Building Scientific Understanding.....	4
The Scientist as Skeptic	5
Elements, Atoms, and Chemical Bonds.....	6
The Periodic Table.....	6
Electrons and Orbits	7
Some Chemical Properties of the Elements.....	13
Chemical Bonding.....	16
A Brief Look at the Earth.....	18
Structure of the Earth.....	18
Plate Tectonics and the Hydrologic Cycle	19
Earth Materials.....	21
References and Suggestions for Further Reading.....	23
Chapter 2: Energy, Entropy and Fundamental Thermodynamic Concepts	24
The Thermodynamic Perspective.....	24
Thermodynamic Systems and Equilibrium.....	24
Fundamental Thermodynamic Variables	26
Equations of State	28
Ideal Gas Law.....	28
Equations of State for Real Gases.....	29
Critical phenomena	31
Equation of State for Other Substances.....	32
Temperature, Absolute Zero, and The Zeroth Law Of Thermodynamics.....	33
Energy and The First Law of Thermodynamics.....	34
Energy	34
Work.....	34
Path independence, Exact differentials, State functions, and the First Law.....	35
The Second Law and Entropy	37
Statement.....	37
Statistical Mechanics: A Microscopic Perspective of Entropy.....	38
Integrating Factors and Exact Differentials.....	44
Enthalpy.....	45
Heat Capacity.....	46
Constant Volume Heat Capacity	47
Constant Pressure Heat Capacity.....	47
Energy Associated with Volume Occupied and the Relationship between C_v and C_p	47
Heat Capacity of Solids: A Problem in Quantum Physics.....	50
Relationship of Entropy to Other State Variables	57
Additive Nature of Silicate Heat Capacities.....	57
The Third Law and Absolute Entropy.....	58
Statement of the Third Law	58
Absolute Entropy.....	58
Calculating Enthalpy and Entropy Changes.....	59
Adiabatic Changes	59
Isobaric and Isothermal Changes in Enthalpy.....	59
Enthalpies of Formation, Vaporization and Fusion.....	60
Entropies of Reaction.....	61

Free Energy	62
Helmholtz Free Energy	63
Gibbs Free Energy	64
Criteria for Equilibrium and Spontaneity	64
Temperature and Pressure Dependence of the Gibbs Free Energy	65
The Maxwell Relations	67
References and Suggestions for Further Reading	67
Problems	68
Chapter 3: Solutions and Thermodynamics of Multicomponent Systems	70
Introduction	70
Phase Equilibria	70
Some Definitions	70
The Gibbs Phase Rule	73
The Clapeyron Equation	75
Solutions	77
Raoult's Law	77
Henry's Law	77
The Chemical Potential	78
Partial Molar Quantities	78
Definition of Chemical Potential and Relationship to Gibbs Free Energy	79
Properties of the Chemical Potential	80
The Gibbs-Duhem Relation	80
Derivation of the Phase Rule	81
Ideal Solutions	82
Real solutions	84
Chemical Potential in Real Solutions	84
Fugacities	85
Activities and Activity Coefficients	86
Excess Functions	88
Electrolyte Solutions	90
The Nature of Water and Water-Electrolyte Interaction	90
Some Definitions and Conventions	92
Activities in Electrolytes	94
Solid Solutions and Their Activities	100
Ideal Solutions in Crystalline Solids	100
Equilibrium Constants	101
Derivation and Definition	101
K _D Values, Apparent Equilibrium Constants and the Solubility Product	104
Henry's Law and Gas Solubilities	105
Temperature Dependence of Equilibrium Constant	106
Pressure Dependence of Equilibrium Constant	107
Practical Approach to Electrolyte Equilibrium	107
Choosing Components and Species	107
Mass Balance	108
Electrical Neutrality	108
Equilibrium Constant Expressions	109
Oxidation and Reduction	110
Redox in Aqueous Solutions	111
Redox in Magmatic Systems	119
References and Suggestions for Further Reading	120
Problems	120
Chapter 4: Applications of Thermodynamics to the Earth	124
Introduction	124

Activities in Non-Ideal Solid Solutions.....	124
Mathematical Models of Real Solutions	124
Exsolution Phenomena.....	127
Thermodynamics and Phase Diagrams.....	129
The Thermodynamics of Melting.....	131
Thermodynamics of Phase Diagrams for Binary Systems.....	132
Geothermometry and Geobarometry.....	138
Theoretical considerations	138
Practical Thermobarometers.....	139
Thermodynamic Models of Magmas	148
Structure of Silicate Melts.....	149
Magma Solution Models	150
Reprise: Thermodynamics of Electrolyte Solutions	155
Mean Ionic Quantities	155
Activities in High Ionic Strength Solutions.....	158
References and Suggestions For Further Reading.....	164
Problems.....	166
Chapter 5: Kinetics: The Pace of Things.....	169
Introduction	169
Reaction Kinetics.....	170
Elementary and Overall Reactions	170
Reaction Mechanisms.....	170
Reaction Rates.....	171
Rates of Complex Reactions.....	176
Steady-State and Equilibrium.....	179
Relationships between Kinetics and Thermodynamics.....	181
Principle of Detailed Balancing.....	181
Enthalpy and Activation Energy	183
Aspects of Transition State Theory	184
Diffusion	188
Diffusion Flux and Fick's Law.....	190
Diffusion in Multicomponent Systems and The Diffusion Coefficient.....	192
Diffusion in Solids and the Temperature Dependence of the Diffusion Coefficient	196
Diffusion in Liquids.....	198
Surfaces, Interfaces, and Interface Processes	199
The Surface Free Energy	200
The Kelvin Effect.....	201
Nucleation and Crystal Growth.....	201
Adsorption.....	206
Catalysis.....	209
Kinetics of Dissolution and Leaching	211
Diagenesis.....	217
Compositional Gradients in Accumulating Sediment.....	217
References and Suggestions for Further Reading.....	221
Problems.....	223
Chapter 6: Aquatic Chemistry.....	227
Introduction	227
Acid-Base Reactions	227
Proton Accounting, Charge Balance, and Conservation Equations.....	228
The Carbonate System.....	230
Conservative and Non-Conservative Ions.....	233
Total Alkalinity and Carbonate Alkalinity	234
Buffer Intensity.....	237

Complexation	238
Stability Constants	239
Water-Related Complexes	240
Other Complexes	242
Complexation in Fresh Waters	244
Dissolution and Precipitation Reactions	244
Dissolution of Carbonates by Ground and Surface Waters	244
Solubility of Mg	248
Solubility of SiO ₂	249
Solubility of Al(OH) ₃ and Other Hydroxides	250
Solubility of Silicates and Related Minerals	253
Clays and Their Properties	255
Clay Mineralogy	256
Ion-Exchange Properties of Clays	258
Mineral Surfaces and Their Interaction With Solutions	259
Adsorption	260
Development of Surface Charge and the Electric Double Layer	264
References and Suggestions for Further Reading	270
Problems	271
Chapter 7: Trace Elements in Igneous Processes	273
Introduction	273
What is a Trace Element?	274
Goldschmidt's Classification of the Elements	275
The Geochemical Periodic Table	277
The Volatile Elements	277
The Semi-Volatiles	278
The Alkali and Alkaline Earth Elements	279
The Rare Earth Elements and Y	280
The HFS Elements	283
The First Series Transition Metals	283
The Noble Metals	284
Other Elements	285
Distribution of Trace Elements Between Co-existing Phases	286
The Partition Coefficient	286
Factors Governing the Value of Partition Coefficients	288
Temperature and Pressure Dependence of the Partition Coefficient	288
Ionic Size and Charge	289
Compositional Dependency	292
Mineral-Liquid Partition Coefficients for Mafic and Ultramafic Systems	297
Crystal-Field Effects	298
Crystal Field Influences on Transition Metal Partitioning	303
Trace Element Distribution During Partial Melting	304
Equilibrium or Batch Melting	305
Fractional Melting	305
Zone Refining	306
Multiphase Solids	306
Continuous Melting	307
Constraints on Melting Models	308
Trace Element Distribution during Crystallization	314
Equilibrium Crystallization	314
Fractional Crystallization	314
In Situ Crystallization	315
Crystallization in Open System Magma Chambers	316

Summary of Trace Element Variations during Melting and Crystallization	318
References and Suggestions for Further Reading.....	320
Problems.....	323
Chapter 8: Radiogenic Isotope Geochemistry	325
Introduction	325
Physics of the Nucleus and the Structure of Nuclei	326
Nuclear Structure and Energetics.....	326
The Decay of Excited and Unstable Nuclei.....	330
Basics of Radiogenic Isotope Geochemistry	333
Geochronology	335
Decay Systems and Their Applications.....	336
Rb-Sr.....	336
Sm-Nd.....	338
Lu-Hf	343
Re-Os	344
La-Ce	348
U-Th-Pb	348
U and Th Decay Series Isotopes	352
Isotopes of He and Other Rare Gases.....	358
Cosmogenic and Fossil Isotopes	362
¹⁴ C.....	362
³⁶ Cl in hydrology.....	363
¹⁰ Be in Subduction Zone Studies.....	364
Cosmic-Ray Exposure Ages of Meteorites.....	364
Fossil Nuclides	364
References and Suggestions for Further Reading.....	364
Problems.....	366
Chapter 9: Stable Isotope Geochemistry.....	370
Introduction	370
Scope of Stable Isotope Geochemistry	370
Notation.....	371
Theoretical Considerations	372
Equilibrium Isotope Fractionations	372
Kinetic Isotope Fractionations.....	378
Isotope Geothermometry	380
Isotope Fractionation in the Hydrologic System.....	383
Isotope Fractionation in Biological Systems.....	385
Carbon Isotope Fractionation During Photosynthesis.....	385
Nitrogen Isotope Fractionation in Biological Processes	387
Oxygen and Hydrogen Isotope Fractionation by Plants.....	388
Biological Fractionation of Sulfur Isotopes.....	389
Isotopes and Diet: You Are What You Eat	389
Paleoclimatology.....	393
The Marine Quaternary $\delta^{18}\text{O}$ Record and Milankovitch Cycles.....	393
The Record in Glacial Ice.....	397
Soils and Paleosols.....	397
Hydrothermal Systems and Ore Deposits	399
Water-Rock Ratios	400
Sulfur Isotopes and Ore Deposits.....	402
Stable Isotopes in the Mantle and Magmatic Systems.....	404
Stable Isotopic Composition of the Mantle.....	404

Stable Isotopes in Crystallizing Magmas	409
Combined Fractional Crystallization and Assimilation	411
Isotopes of Boron and Lithium.....	412
References and Suggestions for Further Reading.....	416
Problems	419

PART III: UNDERSTANDING THE EARTH

Chapter 10: The Big Picture: Cosmochemistry	421
Introduction	421
In the Beginning...Nucleosynthesis.....	421
Astronomical Background.....	421
The Polygenetic Hypothesis of Burbidge, Burbidge, Fowler and Hoyle	423
Cosmological Nucleosynthesis.....	425
Nucleosynthesis in Stellar Interiors.....	425
Explosive Nucleosynthesis.....	428
Nucleosynthesis in Interstellar Space.....	431
Summary	431
Meteorites: Essential Clues to the Beginning	432
Chondrites: The Most Primitive Objects.....	434
Differentiated Meteorites.....	441
Meteorite Mineralogy	443
Relationships among Meteorites and Meteorite Parent-Bodies	440
Time and the Isotopic composition of the Solar System.....	444
Meteorite Ages.....	444
Cosmic Ray Exposure Ages and the Origin of Meteorites	447
Isotopic Anomalies in Meteorites.....	449
Formation of the Solar System.....	453
Astronomical Observations and Theoretical Models of Star Formation.....	454
Formation of Chondritic Meteorites and Processes in the Solar Nebula.....	458
Formation of the Planets	464
The Moon: Its Chemistry and History	468
The Giant Impact Hypothesis	468
Geology and History of the Moon.....	469
References and Suggestions for Further Reading.....	471
Problems	472
Chapter 11: Geochemistry of the Solid Earth I: The Mantle and Core	474
Introduction	474
Composition of the Earth's Mantle	474
Cosmochemical Constraints on the Earth's Composition	474
Upper Mantle Composition.....	475
Phase Transitions in the Mantle	480
The Transition Zone	481
Composition of the Lower Mantle	482
The Primitive Mantle	484
Magma Ocean and Mantle Differentiation.....	486
The Core and Core Formation.....	487
Mantle Geochemical Reservoirs.....	490
Evidence from Oceanic Basalts	490
Evolution of the Depleted Upper Mantle	493
Geochemical Evolution of Mantle Plume Reservoirs.....	500
The Subcontinental Lithosphere.....	505
References and Suggestions for Further Reading.....	508

Problems	510
Chapter 12: Geochemistry of the Solid Earth II: The Crust.....	512
Introduction	512
The Oceanic Crust	512
Processes in Subduction Zones and Island Arc Geochemistry.....	517
Major Element Composition	517
Trace Element Composition.....	519
Isotopic Composition and Sediment Subduction.....	521
Magma Genesis in Subduction Zones	523
Crust—Mantle Interaction: Assimilation	526
Geochemistry of Two-Component Mixtures.....	526
Assimilation—Fractional Crystallization	529
Composition of the Continental Crust.....	530
The Upper Crust.....	531
The Middle and Lower Crust.....	534
The Total Continental Crust	538
Growth of the Continental Crust.....	540
The Pace of Crustal Growth.....	541
Mechanisms of Crustal Growth.....	544
Crustal Growth in the Archean.....	546
References and Suggestions for Further Reading.....	550
Problems	553
Chapter 13: Reactions at the Earth's Surface: Weathering, Soils, and Stream Chemistry.....	555
Introduction	555
Redox in Natural Waters	555
Biogeochemical Redox Reactions	557
Redox Buffers and Transition Metal Chemistry.....	559
Weathering, Soils, and Biogeochemical Cycling.....	563
Soil Profiles.....	564
Chemical Cycling in Soils	567
Biogeochemical Cycling.....	568
Weathering Rates and Reactions.....	570
The Watershed Approach.....	568
Thermodynamic and Kinetic Assessment of Stream Compositions.....	575
Factors Controlling Weathering Rates.....	577
The Composition of Rivers.....	580
Continental Saline Waters.....	584
References and Suggestions for Further Reading.....	587
Problems	588
Chapter 14: Organic Geochemistry	589
Introduction	589
A Brief Biological Background	589
Organic Compounds and Their Nomenclature	590
Hydrocarbons.....	591
Functional Groups.....	593
Biologically Important Organic Compounds.....	596
The Chemistry of Life: Important Biochemical Processes.....	602
Photosynthesis	602
Respiration.....	604
Organic Matter in Soils and Natural Waters.....	606
Dissolved Organic Substances.....	606

Organic Matter in Soils	613
Chemical Properties of Organic Molecules	615
Acid-Base Properties	615
Complexation	616
Adsorption Phenomena.....	622
Sedimentary Organic Matter and Coal and Oil Formation.....	626
Formation and Diagenesis of Organic-Rich Sediments.....	627
Kerogen and Bitumen.....	631
Thermal Evolution of Organic Matter and Petroleum Generation.....	633
Compositional Evolution of Coal	637
Isotopic Composition of Hydrocarbons.....	638
References and Suggestions for Further Reading.....	640
Problems	642
Chapter 15: The Oceans as a Chemical System.....	645
Introduction	645
Some Background Oceanographic Concepts.....	645
Salinity, Chlorinity, Density, and Temperature	645
Circulation of the Ocean and the Structure of Ocean Water.....	646
Composition of Seawater.....	650
Conservative Elements.....	654
Dissolved Gases.....	654
Nutrient Elements.....	663
Particle-Reactive Elements.....	666
Sources and Sinks of Dissolved Matter in Seawater	670
Residence Time	671
The Riverine Source	672
Ridge Hydrothermal Systems	677
The Atmospheric Source.....	688
Sedimentary Sinks and Sources.....	689
References and Suggestions for Further Reading.....	696
Problems	700
